- CBS property - Remediated PCB Superfund Site
- Proposed courts and probation facility and jail

BENNETT STONE QUARRY

The proposed property excludes, but nearly surrounds, a 7.25-acre parcel now owned by the CBS Corporation. Beginning in the 1980s, four of those acres were found to be contaminated by polychlorinated biphenyls (PCBs) from electrical capacitors that were likely dumped there by electronics manufacturer Westinghouse, according to the Environmental Protection Agency (EPA). The site was eventually listed as an EPA Superfund site. Although the EPA says “most” cleanup activities finished in 1999, the current owner, CBS, “is performing long-term monitoring and includes monthly sampling of treated water from the Bennett’s Dump spring water treatment plant, water level measurements and monitoring of springs.”
